**RESPONSE TO INTERVIEW SUMMARY**

Dear Sir:

This response is offered to the Interview Summary of October 18, 2006

A telephonic interview took place on October 3, 2006 regarding this application and co-pending application 09/274,157. Participating in the interview were Examiners Richard Lee and Tung Vo and patent attorneys Paul Mendonsa and Jose Mata.

Mendonsa and Mata proposed amending claim 1 to recite that if a temporally closest anchor frame is previous to a B-frame, then only unidirectionally forward predicting of the B-frame would be performed, using only the temporally closest anchor frame for the prediction. Claim 1 would further recite that if a temporally closest anchor frame is subsequent to a B-frame, then only unidirectionally backward predicting of the B-frame would be performed, using only the temporally closest anchor frame.

RECEIVED  
CENTRAL FAX CENTER

NOV 15 2006

It was agreed that Mendonsa and Mata would fax a copy of a probable amendment to claim 1. After the call was terminated, Examiners Lee and Vo called back and reached Mr. Mata explaining that the previous discussion applied to the *Ju* reference, but not the *Ngai* reference. Mr. Mata expressed his view that the previously discussed amendment would overcome the rejections based on *Ngai* as well.

On October 4, 2006, Mr. Mata faxed the following proposed amendment to claim 1 to Examiner Vo:

1. (Currently Amended). A method for performing motion estimation comprising:
  - receiving a stream of data comprising at least a predicted frame and a temporally closest anchor frame; [[and]]
  - if the temporally closest anchor frame is previous to the predicted frame,  
utilizing even-parity field prediction to only unidirectionally forward predict  
content of each of a plurality of fields of the unidirectionally forward predicted  
frame from corresponding fields of only the temporally closest anchor frame[[.]];  
and
  - if the temporally closest anchor frame is subsequent to the predicted frame,  
utilizing even-parity field prediction to only unidirectionally backward predict  
content of each of a plurality of fields of the unidirectionally backward predicted  
frame from corresponding fields of only the temporally closest anchor frame;
  - wherein the unidirectionally predicted frame that is predicted only from the  
temporarily closest anchor frame comprises a frame that is defined as a bi-  
directionally predicted frame according to an encoding protocol for the stream of  
data.
